

## How to Choose which Font Package to Install

IDAutomation provides two separate installations within this font package. Install the version that best meets your needs. If in doubt, use the standard installation. All symbol encoded fonts in this package contain the letter “Y” in the font name.

File Name	IDAutomation_DataBarFontPackage.exe	IDAutomation_SymbolDataBarFontPackage.exe
Description	This exe provides the standard installation.	This exe installs <a href="#">symbol encoded fonts</a> .
Advantages	<ul style="list-style-type: none"> <li>Provides the highest level of compatibility with all applications and embedding utilities.</li> <li>Provides the highest level of compatibility with cross-platform use.</li> </ul>	<ul style="list-style-type: none"> <li>The symbol encoding within the font will usually show the font in its own name, making it easier for users to select the desired font within an application, as shown below.</li> </ul>
Disadvantages	<ul style="list-style-type: none"> <li>Standard fonts usually show the font in its own name with a preview, which can make it difficult to select the desired barcode font within some applications, as shown below. This is because the characters representing the name are actually barcode symbols within the font.</li> </ul>	<ul style="list-style-type: none"> <li>Recommended for use on Windows only and may not be compatible with all applications and cross-platform use, such as moving a document from Windows to Mac.</li> <li>Some versions of Microsoft Office will truncate the font names. The taller fonts will have more truncated names as in this screenshot below which shows the font heights in red.</li> </ul> 
Font Selection Screenshot Example (The <a href="#">Code 39 font</a> is shown in this example)
