

## Customization: 1- ChronoX

When you start Exulium, here is a WokLaB button wich open the WokLaB Folder  
From here there is the Stylist Folder and a Stylist File.

In this File you will define the name of your ChronoX : <Poste Nam= contain the begin of the name of the file wich retain actions and time, here, the place is named FHDMax , Exulium add ChronoX and it is in XML.  
Then, the File will here be named : FHDMaxChronoX.xml

```
File Edit View History Bookmarks Tools Help
This XML file does not appear to have any style information associated with it. The document tree is shown below.
- <Moliere>
  />
  <Fenetre Label_Fenetre_BackgroundColor="white" LisT_Fenetre_BackgroundColor="white" ForegroundColor="darkblue"
  Bold="" Font="arial" FontSize="12"/>
  <Button BackGroundColor="Grey" ForegroundColor="white" Bold="" Font="Roman" FontSize="12"/>
  <List BackGroundColor="white" ForegroundColor="darkblue" Bold="" Font="arial" FontSize="8" Height="4"/>
  <Label BackGroundColor="white" ForegroundColor="grey18" Bold="" Font="arial" FontSize="8"/>
  <Message BackGroundColor="white" ForegroundColor="grey18" Bold=" bold" Font="arial" FontSize="18"/>
  <Action BackGroundColor="oldlace" ForegroundColor="darkblue" Bold="" Font="arial" FontSize="8"/>
  <ActionButton BackGroundColor="SlateGray" ForegroundColor="white" Bold="" Font="Roman" FontSize="4" Size="4"/>
  <ActionLabel BackGroundColor="oldlace" ForegroundColor="darkblue" Bold="" Font="arial" FontSize="10"/>
  <Poste Nam="Exa" ScreenBackGrounD="white"/>
</Moliere>
```

So you can personalize with your name or place, don't forget to rename the ChronoX

## 2-Colors, Fonts, sizes and languages: Stylist

Sablure can now customize the colors of substantive text, fonts, and font sizes of the various elements and language

Each element is definable, you compose your presentation ideal

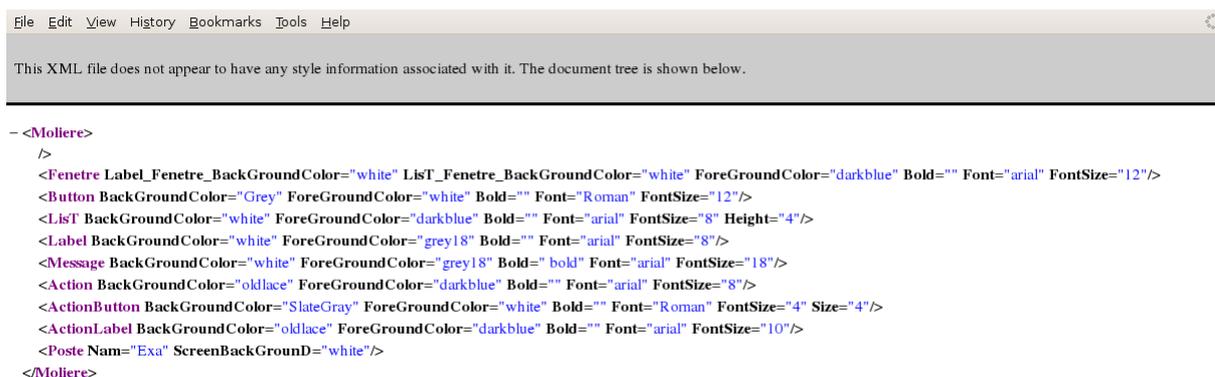

The list of colors is in DocStoR/couleurs.txt

And you will find a program to list your fonts in DocStoR/Polices

For bold type Bold = 'bold'

Bold = ''for normal text

The texts and language are fully defined in the file LanGage.xml

```

This XML file does not appear to have any style information associated with it. The document tree is shown below.
- <Moliere>
  />
  <Fenetre Label_Fenetre_BackgroundColor="white" LisT_Fenetre_BackgroundColor="white" ForegroundColor="darkblue" Bold="" Font="arial" FontSize="12"/>
  <Button BackGroundColor="Grey" ForegroundColor="white" Bold="" Font="Roman" FontSize="12"/>
  <List BackGroundColor="white" ForegroundColor="darkblue" Bold="" Font="arial" FontSize="8" Height="4"/>
  <Label BackGroundColor="white" ForegroundColor="grey18" Bold="" Font="arial" FontSize="8"/>
  <Message BackGroundColor="white" ForegroundColor="grey18" Bold=" bold" Font="arial" FontSize="18"/>
  <Action BackGroundColor="oldlace" ForegroundColor="darkblue" Bold="" Font="arial" FontSize="8"/>
  <ActionButton BackGroundColor="SlateGray" ForegroundColor="white" Bold="" Font="Roman" FontSize="4" Size="4"/>
  <ActionLabel BackGroundColor="oldlace" ForegroundColor="darkblue" Bold="" Font="arial" FontSize="10"/>
  <Poste Nam="Exa" ScreenBackGrounD="white"/>
</Moliere>
```

### 3-Internationalization:

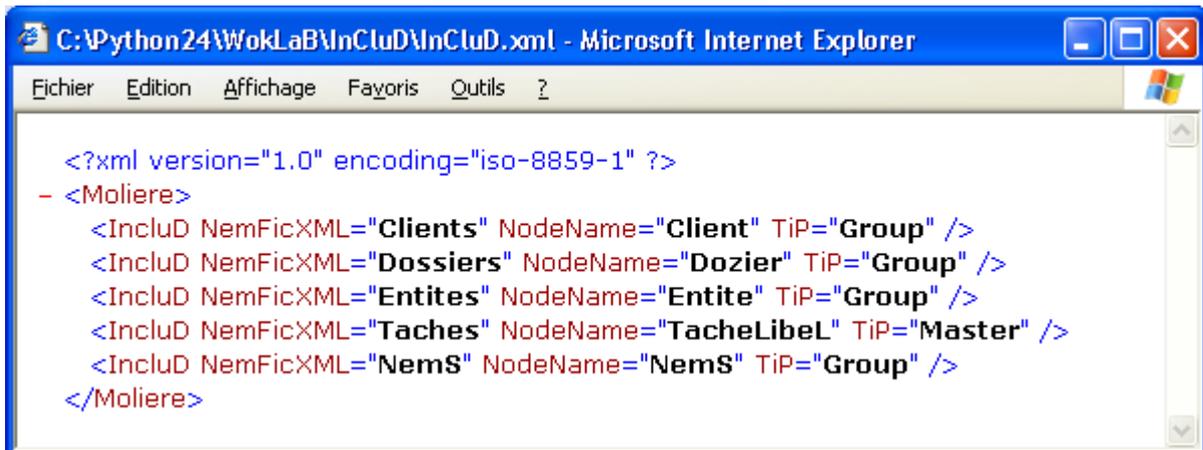

it is possible to adapt sablures for all computer languages, why there is a encoding.xml file in the directory stylist.xml or you can change the encoding used. you will also need to change each xml file in the encoding chosen. Functionality untested. You can submit your files to contact@sablures.net

### 4-Attributes and lists:

Version 0.2.1 to 0.2.6 provides polymorphism it is you who are defining and identifying the lists they pre-present.

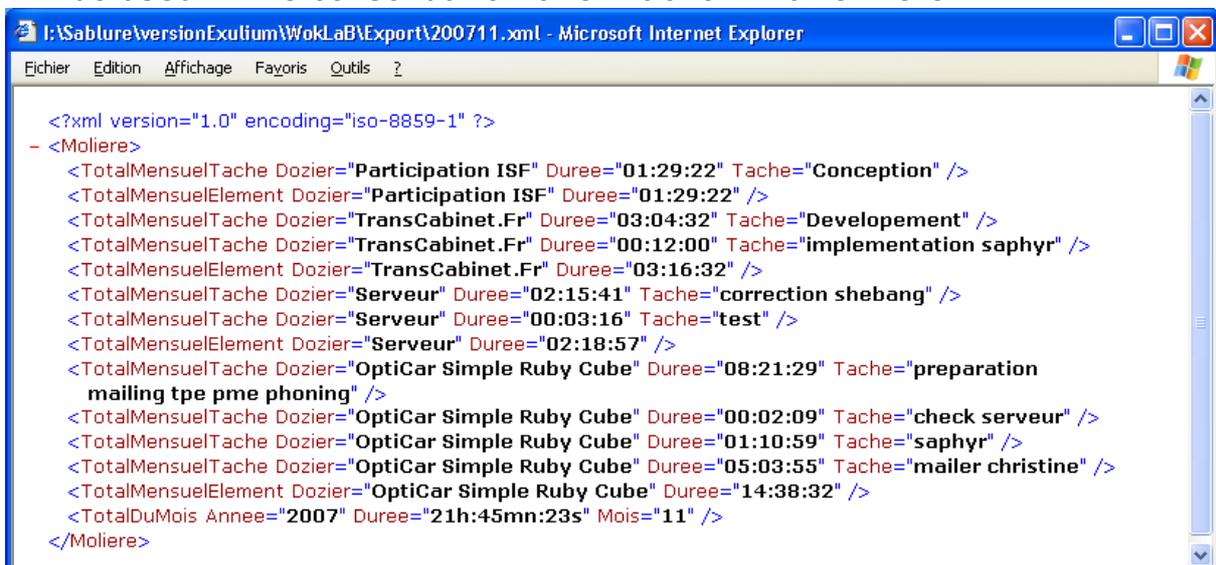

Here's how a works:

In the InCluD folder of the WokLaB you will find a file named InCluD.xml :

```
<?xml version="1.0" encoding="iso-8859-1" ?>
- <Moliere>
  <IncluD NemFicXML="Clients" NodeName="Client" TiP="Group" />
  <IncluD NemFicXML="Dossiers" NodeName="Dozier" TiP="Group" />
  <IncluD NemFicXML="Entites" NodeName="Entite" TiP="Group" />
  <IncluD NemFicXML="Taches" NodeName="TacheLibel" TiP="Master" />
  <IncluD NemFicXML="NemS" NodeName="NemS" TiP="Group" />
</Moliere>
```

The **NemFicXML** contains filenames (without. Xml) **NodeName** attribute contains the name of the node \* of this file (attention is also the name that will be used in the consolidation of extraction: Dozier here:

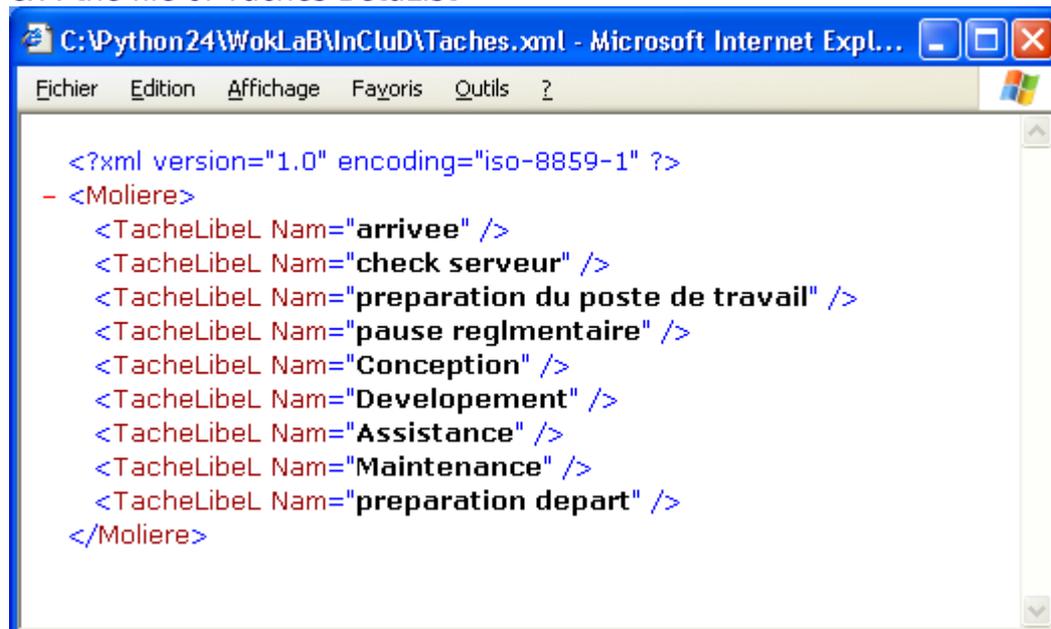

```
<?xml version="1.0" encoding="iso-8859-1" ?>
- <Moliere>
  <TotalMensuelTache Dozier="Participation ISF" Duree="01:29:22" Tache="Conception" />
  <TotalMensuelElement Dozier="Participation ISF" Duree="01:29:22" />
  <TotalMensuelTache Dozier="TransCabinet.Fr" Duree="03:04:32" Tache="Developement" />
  <TotalMensuelTache Dozier="TransCabinet.Fr" Duree="00:12:00" Tache="implementation saphyr" />
  <TotalMensuelElement Dozier="TransCabinet.Fr" Duree="03:16:32" />
  <TotalMensuelTache Dozier="Serveur" Duree="02:15:41" Tache="correction shebang" />
  <TotalMensuelTache Dozier="Serveur" Duree="00:03:16" Tache="test" />
  <TotalMensuelElement Dozier="Serveur" Duree="02:18:57" />
  <TotalMensuelTache Dozier="OptiCar Simple Ruby Cube" Duree="08:21:29" Tache="preparation mailing tpe pme phoning" />
  <TotalMensuelTache Dozier="OptiCar Simple Ruby Cube" Duree="00:02:09" Tache="check serveurur" />
  <TotalMensuelTache Dozier="OptiCar Simple Ruby Cube" Duree="01:10:59" Tache="saphyr" />
  <TotalMensuelTache Dozier="OptiCar Simple Ruby Cube" Duree="05:03:55" Tache="mailer christine" />
  <TotalMensuelElement Dozier="OptiCar Simple Ruby Cube" Duree="14:38:32" />
  <TotalDuMois Annee="2007" Duree="21h:45mn:23s" Mois="11" />
</Moliere>
```

**TiP** attribute identifies the group, **TiP Group** is the general type of ID and **TiP Master** identifier identifies what is the stain itself, attention: there can be a **TiP Master** and can not be **NodeName "Tache"**

\*node : in include.xml for exemple the name of node is **IncluD**

Then you can draw up a pre-list (you can always enter new values) in those famous files,

ex : the file of Taches BetaList

```
<?xml version="1.0" encoding="iso-8859-1" ?>
- <Moliere>
  <TacheLibeL Nam="arrivee" />
  <TacheLibeL Nam="check serveur" />
  <TacheLibeL Nam="preparation du poste de travail" />
  <TacheLibeL Nam="pause reglmentaire" />
  <TacheLibeL Nam="Conception" />
  <TacheLibeL Nam="Developement" />
  <TacheLibeL Nam="Assistance" />
  <TacheLibeL Nam="Maintenance" />
  <TacheLibeL Nam="preparation depart" />
</Moliere>
```

Note that the list is always constituted by the attribute **Nam**

#### **5-Features emerged to version 0.2.8:**

Version 0.2.8 brings a new feature, for example the change in price, place, person at the bar spots a list box to select the list and another list box allows you to select the attribute to change a button on the right applies the change.

Note: This change on the fly as the 0.3.8 version of the spot ends with the old attributes and starts a new spot for the new attributes for coherence in the extractions.

#### **5-Features emerged to version 0.2.8:**

Version 0.2.8 brings a new feature, for example the change in price, place, person at the bar spots a list box to select the list and another list box allows you to select the attribute to change a button on the right applies the change.

Note: This change on the fly as the 0.3.8 version of the spot ends with the old attributes and starts a new spot for the new attributes for coherence in the extractions.

Here you can customize and pre-fill a substantive your exulium

Good work
